PROFESSIONAL SUMMARY

Motivated Computer Science and Software Engineering student graduating in 2026 with hands-on experience in real-time systems, hardware-software integration, and CAD-based engineering workflows. Proven ability to design, build, and deploy technical solutions in Agile/Scrum environments. Passionate about applying multidisciplinary engineering skills within motorsports, automotive, or similar industries.

EDUCATION

Computer Science
Bachelor of Science
University of West Florida
Class of – 2026

Mechanical Design and Fabrication
Associate of Science
Pensacola State College
Class of - 2021

RELEVANT CLASSES

- Software Engineering 1 & 2
- Software Engineering Management
- Linear Algebra
- Data Structures and Algorithms 1&2

Skills:

- C++
- TypeScript
- Python
- VS Code
- Github
- AutoCAD / Fusion360
- Linux based systems
- Hardware-Software Integration
- Agile/Scrum Development

Featured Project:

ChronoBox — Real-Time GNSS Track Telemetry System

Senior Capstone Project

- Designed and implemented a real-time telemetry system using Python on a Raspberry Pi
- Processed GNSS data at 10 Hz to calculate lap timing and vehicle position
- Built a live visualization interface displaying track position and session timing
- Implemented cloud synchronization using Firebase for real-time monitoring
- Integrated hardware and software components into a complete end-to-end system
- Designed the system to maintain consistent real-time performance and reliable telemetry updates during live vehicle operation

RELEVANT WORK EXPERIENCE:

EN Engineering – CAD Designer

March 2020 – August 2023

- Designed electrical utility infrastructure for Florida Power and Light within subdivisions using GIS CAD software, ensuring optimal layout and functionality.
- Conducted comprehensive calculations across various parameters to guarantee safe and reliable power delivery.
- Collaborated closely with subdivision developers and engineers to identify cost-effective and efficient solutions for project completion.
- Managed high-value projects, ensuring timely delivery of products and services to meet client requirements.
- Worked within Agile/Scrum development environments, participating in structured workflows, task tracking, and team coordination.
